## PROFILE

Automation & Robotics Engineering student with work experience in robotic applications, industrial experience, event management, and project coordination. Proficient in using technology tools such as Arduino, ESP32, Raspberry Pi, sensors, and automation for developing solutions. Fascinated with concepts of Artificial Intelligence, robotics, and new technological developments in engineering with great enthusiasm towards hands-on problem solving and learning. Have worked in teams, managed technical events, and taken responsibility effectively in cooperative work environments.

## PROFESSIONAL EXPERIENCE

**Intern** 05/2026 – 06/2026  
**Bhathwari Technologies PVT LTD** Ahmedabad, Gujarat

- Gained practical exposure to industrial tools, machinery, and technical processes.
- Assisted in technical observations, workshop activities, and operational tasks.
- Developed problem-solving, teamwork, and communication skills in a professional environment.
- Learned workplace safety standards, discipline, and real-world engineering applications.

**Operations Intern (Transport Department)** 01/2026 – 05/2026  
**Parul University** Vadodara, Gujarat

- Excel data entry
- Assisted in Transport registration and Logistics coordination
- Maintenance of transport-related records
- Coordinated with students and staff regarding transport schedules and routes

**Event Coordinator** 03/2025 – Present  
**Parul University** Vadodara, Gujarat

- Successfully, completed 25+ Events as a student coordinator in different committees for the successful execution of the events.
- Completed 3 Technical events Odoo Hackathon 2026, TechExpo 2026 and PU Code Hackathon 3.0 as student coordinators lead.

## EDUCATION

**Diploma in Automation and Robotics** 07/2024 – Present  
**Parul University** Vadodara, Gujarat

**10th Class (CBSE)** 04/2023 – 05/2024  
**RBK Hanumant High School** Mahuva, Gujarat

## SKILLS

|                     |                    |
|---------------------|--------------------|
| Microsoft Office    | Data Management    |
| Autodesk Fusion 360 | Event Coordination |
| Prompt Engineering  | Sensors            |

## CERTIFICATES

|                                      |                                  |
|--------------------------------------|----------------------------------|
| <b>Introduction To Generative AI</b> | <b>Bring AI To Work Workshop</b> |
| Google Cloud Skills Boost            | Google Workspace                 |

## LANGUAGES

|          |       |
|----------|-------|
| English  | Hindi |
| Gujarati |       |

## INTERESTS

Robotics | Chess | Music | Photography

## PROJECTS

---

### AI Autonomous Driving Robot

12/2025

- Raspberry PI 5 integration with different sensors like LiDAR, SIM800L, GPS, Etc.
- Used OpenCV with Python GUI for the coding.
- Google AI Studio for the LiDAR distance mapping and to check the status of the bot and the other sensors.

### Hand Gesture Controlled Robot Car

02/2026

- Arduino UNO R3 integration with different sensors like HC-12, MPU6050, ESP32 - CAM, L298N Motor Drivers, Etc.
- A hand gesture controlled car used for Surveillance at hazardous places.
- Web page live Camera streaming with the IP Address of the ESP32 - CAM.

### Passenger Attendance System

03/2026

- Made a passenger attendance system using the Python, HTML, JS and the Google sheets API key.
- Passenger captures the static QR Code attached in the specific bus.
- The records get automatically updated in the Google sheets with their records like Name, ID, Time, Bus number, Etc.

### Mapping Robot Car

04/2026

- ESP32 Integration with different sensors like LiDAR, MPU6050, HC-SR04, Etc.
- LiDAR Detects the walls and the car moves autonomously covering the borders of the room and measuring the distance.
- Connected to an HTML page for the live 2d mapping.

### Stretch Wrapping Robot

05/2026

- Arduino UNO R3 integration with NEMA-17 Stepper motors, CNC Shield, A4988 Motor drivers, Etc.
- Using the 4040 Aluminum extrusion and 2020 V-Wheel gantry plate for the movement and the placement of the Stretch wrap roll.
- Using the SMPS Power supply for the power distribution.
- A Stretch wrapping robot where a box is placed and the box is wrapped with the Stretch wrap roll.

### FinNexa AI

07/2026

- Made an intelligent financial advisory platform using Next.js, React, Supabase and the OpenRouter API key.
- User interacts with the AI assistant and uploads financial documents for instant analysis.
- The records get automatically updated in the database with their details like Chat History, SIP Projections, EMIs, Etc.
